DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, drawn to a method of treating a patient with autoimmune disease by administering antibody to BLys, classified in class 424, subclass 130.1.
- II. Claims 4-9, drawn to a method of monitoring changes in condition of a patient by measuring the level of BLys, classified in class 435, subclass 7.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. The methods are independent and distinct each from the other because they have different goals (treatment of a patient versus monitoring of a patient), different method steps (administration of an antibody versus exposing samples of sera or plasma) and have different final outcomes (therapy versus monitoring diagnostics). The recited methods therefore define independent and distinct inventions.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the because of their recognized divergent subject matter, art as shown by their different classification, restriction for examination purposes as indicated is proper. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or

more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
